### **New Jersey Roofer Completes Sustainable Metal Roofing Project in Newark, NJ**

**Newark, NJ April 2013**— Joseph David Roofing announced the completion of a new roofing installation on a commercial warehouse in Newark. The warehouse had a mansard roof that was severely damaged by superstorm Sandy. The company needed to find a material that was compatible to the existing roofing that was not affected by the storm and would provide guaranteed protection against future damage. A perfect choice was Classic Metal Roofing System's rustic shingle, which is designed to look like a standard residential shingle but provides all the benefits of a metal roof. The product is relatively new to Joseph David Roofing and the company was very pleased with the ease of installation.

Metal shingles like this are a great choice for a commercial project and provide several benefits to the customer. Not only are they strong, wind resistant, and largely impenetrable, they provide a beautiful and distinguished look from typical metal roofs. The maintenance is minimal since metal shingles do not crack or rot. They provide extra safety, too, since they are completely fire-resistant. Additionally, these shingles--and metal roofing in general--are great for the environment. They're made from at least 95% recycled aluminum. Metal roofs can often be installed over an existing roof which helps reduce waste and landfill burden.

Joseph David Roofing was able to finish the project quickly and the owner now has a manufacturer's warranty that covers the shingles against chipping, peeling, flaking, blistering, splitting, or cracking with age for 40 years. The warranty transfers to all future owners within that time frame. If the roof does experience a warranted failure, Classic Metal Roofing covers not just the replaced parts but the workmanship.
